

RASHEED FARHAT

SECURITY OPERATIONS | DETECTION AUTOMATION | ASSURANCE

Rochester, MN | 530-370-5109 | rasheedfrht@gmail.com | rasheedfarhat.github.io

SUMMARY

Early-career cybersecurity professional with hands-on alert triage from a CrowdStrike mentorship program, 17 months of help-desk experience, and strong project evidence in detection automation and control assurance. Holds CompTIA Security+ and CySA+ and an Associate of Science in Cybersecurity and Information Assurance. Built a tested Sigma-to-Wazuh compiler, measured detection behavior against a labeled corpus, and writes clear runbooks, evidence records, and limitations.

SKILLS

Security Operations: Alert triage, escalation, incident documentation, Windows and Linux telemetry, MITRE ATT&CK, Wazuh, Wireshark, Falcon EDR and Splunk in simulated environments

Detection and Engineering: Python, Bash, Sigma, GitHub Actions, automated testing, REST APIs, rule validation, coverage measurement, dry-run deployment, runbooks

Assurance and Systems: Control evidence, risk findings, remediation tracking, vendor-style assessments, NIST CSF, Windows, macOS, Linux, TCP/IP, routing, switching, wireless

EXPERIENCE

Cybersecurity Mentorship Program, CrowdStrike

Remote | Oct 2024 to Apr 2025

- Triageed endpoint and system alerts in simulated Windows and Linux enterprise environments using Falcon EDR, Splunk, and Wireshark, then documented findings and escalation reasoning.
- Mapped observed behavior to MITRE ATT&CK and investigated root causes under senior-analyst mentorship.

STEM Office Staff (Help Desk), Butte College

Oroville, CA | Oct 2023 to Feb 2025

- Served as first point of contact for students, faculty, and staff, resolving computer, software, hardware, peripheral, and WLAN issues and escalating complex cases.
- Logged, prioritized, tracked, and documented requests independently over 17 months.

SELECTED PROJECTS

Detection-as-Code Pipeline: Sigma to Wazuh

Python, Wazuh, GitHub Actions | 2025 to 2026

- Built a compiler turning 58 Sigma rules into 216 Wazuh rules across 119 MITRE ATT&CK techniques and 14 tactics, gated by 87 automated tests and seven CI workflows.
- Added dry-run-first REST deployment, 401 re-authentication, a blast-radius safeguard, and operator runbooks.

MCP-DETECT and Control Assurance

Python, JSON, Markdown | 2025 to 2026

- Built 10 rules for five AI-agent abuse techniques and measured zero false positives across a 4,727-record, 541-session benign corpus; tested 12 evasion classes and documented three blind spots.
- Defined a six-state control-evidence taxonomy and wrote a synthetic client-style assessment with 12 integrations, four ranked findings, remediation, and explicit limitations.

Self-Hosted Identity and Deception Lab

Docker, Authentik, Flask, AbuseIPDB | 2026

- Integrated SSO, account provisioning, deception alerts, source-IP recovery, and threat-intelligence enrichment, then documented setup and troubleshooting for repeatable operation.

EDUCATION AND CERTIFICATIONS

Associate of Science, Cybersecurity and Information Assurance, Butte College | Aug 2021 to Dec 2024 | Dean's List, 4.0 GPA, Spring 2024

Certifications: CompTIA CySA+ | CompTIA Security+ | Cisco CCNA | Cisco IT Essentials | Linux Professional Certification | AWS Cloud Practitioner in progress
